

Use Case Consulting

eoda | Data Science Use Case Workshop

Our offer:

- One-day on-site workshop – we evaluate data science use cases with regard to your data situation or expected benefits as well as identify yet unknown use cases for your company
- We will create a qualitative and quantitative reporting of the most promising use cases

Fields of Application:

- Companies which are looking for the best use case for them to unlock the potential of data science
- Companies in the digital transformation which want to implement data-based analysis processes or optimize existing processes

Advantages:

- Security: Use the Data Science Use Case Workshop to form a basis for successful data science projects with a fast ROI
- Experience: Our extensive experience in the conception and implementation of data science projects is incorporated in the Data Science Use Case Workshop
- Industrial transfer: Input for new use cases and approaches

Price:

- € 5,200 (*including travel costs in Germany, plus VAT)

Project Realization

We implement your data science projects

Our offer:

- Initial workshop: We determine the project scope together with you and define relevant data as well as the project schedule and technical procedure
- Data management: Cleansing, merging and recoding
- Modelling: we develop analyses and forecasting models adapted to your objectives
- Concluding workshop: We explain our approach, train your employees with regard to the methods used and present the project results

Fields of Application :

- Companies that have identified a use case, want to implement it and draw competitive advantages from it
- Companies that do not have (sufficient) resources of their own for an implementation

Advantages:

- Enablement: In close cooperation we implement your data science use cases and explain our approach
- Experience: Benefit from our long-term experience designing and implementing data science projects for companies of all sectors

Price:

- Depending on your requirements and the project scope, we would be happy to make you an individual offer

Technology & Infrastructure

eoda | analytic infrastructure consulting

Our offer:

- Development and operation of your analytical infrastructure
- Assessment: Consulting on individual requirements regarding the application of data science in your operative business processes
- Implementation: Implementation of software, methods, processes and best practice approaches that enable the professional operation of data science in your company
- Operation: Monitoring, maintenance and support of the implemented framework

Fields of Application :

- Companies in the digital transformation that seek to optimize their data-driven analysis processes
- Companies which are planning a systematic and future-proof integration of data science tools
- Companies which want to increase the importance of analytics

Advantages:

- Professional partner
- Security for the professional operation of your analytical environment
- State-of-the-art techniques and processes

Price:

- Assessment: € 9,400 (including travel costs in Germany, plus VAT)
- Implementation and operation on request

YUNA

Data Science Software

Our offer:

- YUNA is the central interface for efficient management and execution of data analyses in your company
- Consisting of a core (connection to data sources, management of user rights & analysis scripts, control of jobs etc.) and a portal (web application for explorative analysis and visualization, flexible widget concept)

Fields of Application :

- Companies that already rely on data science and want to drive operationalization across departments

Advantages:

- Benefit from data science across departments through the data science workflow
- Easy integration through interfaces to existing business applications
- High performance through load distribution
- Controlled environment (stable execution of analysis projects)
- Transparent and traceable analyses and results

Price:

- On request: We would be happy to explain our software solution

Data Science Talks & Trainings

Cross-departmental knowledge transfer

Our offer:

- Talks about data science enablement
- Trainings for R & Python

Fields of Application:

- Management and departments
- Data Scientists: basic & advanced

Advantages:

- Experienced training provider
- Personal support in small groups
- Possibility for individual in-house training courses with regard to your specific requirements

Price:

- Prices can be found on the homepage
- For in-house events we will be happy to make you an individual offer

Coaching & Support

Data Science Implementation:

- We can show you the right way for your digitalization initiatives

Team Expansions:

- Our experienced data scientists support your analysis team

Product / Project Ownership:

- As external product / project owner, we ensure that your analysis project or your data product will be a success

Code Review:

- We support data teams as a permanent contact for the optimization of analysis scripts

About eoda

eoda is an IT company specialized in data science. Its portfolio comprises consulting, analytic services, software and training.

The services cover the entire workflow from data acquisition to analysis to the interpretation of results and the integration of analysis workflows into existing processes and applications.

The interdisciplinary team of eoda combines a profound knowledge of business processes with a competent usage of suitable methods for statistical analysis.
